

EnviroMax Soil Treatment

APPLICATION GUIDELINES

Mix ample water with EnviroMax for good penetration into the soil.

Boom Sprayer - 3-6 oz/1000 in 1-2 gallons of water per 1000 square feet. Water-in after application with a minimum of ¼ inch of water. Repeat as needed, up to 6 times per season.

Irrigation System – Inject 12-24 fl oz per acre (1-2 L/Ha) on a weekly basis. For more difficult areas, EnviroMax may be applied at a maximum rate of 64 oz per acre (10 L/Ha)

Active Ingredients

Polymaleic anhydride anionic terpolymer.....40.0%
Maleic anhydride sulfonated copolymer.....4.0%
Inert ingredients.....56.0%
Total.....100%
Weight per Gallon: 10.16 lbs. /gal @ 68°F

2 x 2.5 gal

PROBLEM

Slow Water Infiltration-Poor Soil Nutrient Release- Low Soil Microbial Activity

EnviroMax contains an even balance of hydrophilic (water loving) and hydrophobic (water hating) molecules.

- ✓ The “water-loving” part conserves moisture
- ✓ The "water hating" drives and pushes water through thatch, and soil deep into the profile.

EnviroMax is an organic based product with polymers that when applied to the ground open soil pore space to improve water distribution uniformity. It will relieve dry spots and improve water infiltration uniformity.

EnviroMax can be applied at light frequent rates to keep water moving through the surface of the turfgrass, or applied an initial heavy rate, watered in deeply, then repeated 15 days later.

BENEFITS

- ✓ Increase soil pore space
- ✓ Increased oxygen and water soil root zone content
- ✓ Increased biological activity
- ✓ Leaches detrimental salts and metals
- ✓ Better retention and root availability of soil nutrients
